The infwarerr package

Heiko Oberdiek* <heiko.oberdiek at googlemail.com>

2016/05/16 v1.4

${\bf Abstract}$

This package provides a complete set of macros for informations, warnings and error messages with support for plain T_EX .

 $^{{\}rm ^*Please\ report\ any\ issues\ at\ https://github.com/ho-tex/oberdiek/issues}$

1 Documentation

Package infwarerr defines the following set of commands, given as pseudo regular expression:

```
\@(Package|Class)(Info|InfoNoLine|Warning|WarningNoLine|Error)
```

The first argument is the package or class in question. The second argument contains the message text. \MessageBreak is supported. In case of error messages, the third argument contains the help text. Supported are LaTeX's message texts \Qehc:

```
Try typing <return> to proceed

If that doesn't work, type X <return> to quit.
```

and \@ehd:

```
You're in trouble here. Try typing <return> to proceed If that doesn't work, type X <return> to quit.
```

The package is intended for macro writers that want to write code that works for both LATEX and plain TEX. If LATEX is detected, then the macros of this package will only be wrappers for LATEX's macros. Otherwise LATEX's macros will be mimicked for use with plain TEX.

2 Implementation

```
1 (*package)
```

2.1 Reload check and package identification

Reload check, especially if the package is not used with LATEX.

4 Installation

4.1 Download

Package. This package is available on CTAN¹:

CTAN:macros/latex/contrib/oberdiek/infwarerr.dtx The source file.

CTAN:macros/latex/contrib/oberdiek/infwarerr.pdf Documentation.

Bundle. All the packages of the bundle 'oberdiek' are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

CTAN:install/macros/latex/contrib/oberdiek.tds.zip

TDS refers to the standard "A Directory Structure for TEX Files" (CTAN:tds/tds.pdf). Directories with texmf in their name are usually organized this way.

4.2 Bundle installation

Unpacking. Unpack the oberdiek.tds.zip in the TDS tree (also known as texmf tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory TDS:scripts/oberdiek/ for scripts that need further installation steps. Package attachfile2 comes with the Perl script pdfatfi.pl that should be installed in such a way that it can be called as pdfatfi. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

4.3 Package installation

Unpacking. The .dtx file is a self-extracting docstrip archive. The files are extracted by running the .dtx through plain TFX:

```
tex infwarerr.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as texmf tree):

```
\label{eq:constraint} \begin{split} & \to \mathsf{tex/generic/oberdiek/infwarerr.sty} \\ & \mathsf{infwarerr.pdf} \\ & \to \mathsf{doc/latex/oberdiek/infwarerr.pdf} \\ & \mathsf{test/infwarerr.test1.tex} \to \mathsf{doc/latex/oberdiek/test/infwarerr.test1.tex} \\ & \mathsf{test/infwarerr.test2.tex} \to \mathsf{doc/latex/oberdiek/test/infwarerr.test2.tex} \\ & \mathsf{test/infwarerr.test3.tex} \to \mathsf{doc/latex/oberdiek/test/infwarerr.test3.tex} \\ & \mathsf{infwarerr.dtx} \\ & \to \mathsf{source/latex/oberdiek/infwarerr.dtx} \end{split}
```

If you have a docstrip.cfg that configures and enables docstrip's TDS installing feature, then some files can already be in the right place, see the documentation of docstrip.

¹http://ctan.org/pkg/infwarerr

4.4 Refresh file name databases

If your T_EX distribution (teT_EX, mikT_EX, ...) relies on file name databases, you must refresh these. For example, teT_EX users run texhash or mktexlsr.

4.5 Some details for the interested

Unpacking with LATEX. The .dtx chooses its action depending on the format:

plain T_EX: Run docstrip and extract the files.

LATEX: Generate the documentation.

If you insist on using LATEX for docstrip (really, docstrip does not need LATEX), then inform the autodetect routine about your intention:

```
latex \let\install=y\input{infwarerr.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the .dtx or the .drv to generate the documentation. The process can be configured by the configuration file ltxdoc.cfg. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfIATeX:

```
pdflatex infwarerr.dtx
makeindex -s gind.ist infwarerr.idx
pdflatex infwarerr.dtx
makeindex -s gind.ist infwarerr.idx
pdflatex infwarerr.dtx
```

5 Catalogue

The following XML file can be used as source for the TEX Catalogue. The elements caption and description are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is infwarerr.xml.

```

591
    <description>
      This package provides a complete set of macros for information,
592
      warning and error messages. Under LaTeX, the commands are
593
594
      wrappers for the corresponding LaTeX commands; under Plain TeX
595
      they are also available as complete implementations.

6 History

[2007/04/26 v1.0]

• First version.

[2007/06/14 v1.1]

• Small fixes.

[2007/09/09 v1.2]

• Catcode section extended.

[2010/04/08 v1.3]

• Ensure \escapechar=92 (backslash) for infos/warnings/errors.

[2016/05/16 v1.4]

• Documentation updates.

7 Index

Numbers written in italic refer to the page where the corresponding entry is described; numbers underlined refer to the code line of the definition; plain numbers refer to the code lines where the entry is used.
